

ABSTRACT OF THE DISCLOSURE

A recording medium and a recording apparatus for storing manufacturer information for supporting specific functions for each manufacturer and a method therefor. A
reproducing apparatus for reproducing manufacturer information for supporting specific
5 functions and a method therefor is also provided. If a recording apparatus modifies the
contents of the recording medium, then it should record its manufacturer's identification
code. A recording apparatus/reproducing apparatus should check the identification code on
the recording medium before using its own manufacture information item for some specific
function. Also, it is possible to reduce the time required to determine whether the
10 manufacturer information items are effective.
